TECHNICAL NOTE

26

Revised¹

This technical note is concerning the new Trompeter Audio Jack Field AJSL-48 Longframe and the AJSM-96S Bantam jack panels offered in the HDTV catalog. These panels are fully enclosed with the normals wired out. Each panel has a backplane where the incoming audio wiring is connected. The connections use a rapid punch method to insert the wire. Special tooling is required to accomplish this task. The necessary tooling listed below can be ordered from Trompeter under the following part numbers:

- QB-2: Rapid punch installation tool *with incorrect* tip (see note 1).
- QB-2-RBT: Rapid punch installation tool with *correct* tip (*RPT-TIP*).
- RPT-TIP: Rapid punch tip only.
- RPT-RT: Rapid punch removal tool.

Note 1: QB-2 comes supplied with a *standard* tip that cannot be used in conjunction with these panels.

If you need any further amplification, or your customer asks a question that is not addressed, contact Bill Berger in Technical Support at (818) 865-6534, or e-mail at bill.berger@trompeter.com. We look forward to your questions.
